REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The Applicant claims an electrochemical cell having a solid cathode, an anode and an ionically conductive electrolyte activating the anode and the cathode, the improvement in the cathode comprising a substrate having opposed first and second major faces; and a cathode active material provided as a physical vapor deposited layer coated on both of the first and second major faces of the substrate.

Applicant claims a secondary electrochemical cell, which comprises a casing, a negative electrode, a positive electrode comprising a positive electrode active material provided as a physical vapor deposited layer coated on opposed first and second major faces of a substrate, wherein the positive electrode active material is selected from the group consisting of lithiated oxides, lithiated sulfides, lithiated selenides, and lithiated tellurides of at least one selected from the group consisting of vanadium, titanium, chromium, copper, tin, molybdenum, niobium, iron, nickel, cobalt, manganese, and mixtures thereof; and an electrolyte activating the electrodes housed in the casing.

The Applicant claims a cathode of an electrochemical cell, which comprises a substrate of electrically conductive material having opposed first and second major faces and cathode active material supported on both of the first and second major faces of the substrate, wherein the layer of cathode active material is characterized as having been deposited onto the substrate by a physical vapor deposition coating process.

The prior art of record, Takeuchi et al., U.S. Pat. No. 5,569,558, and Klementowski, U.S. Pat. No. 5,616,429, disclose a secondary electrochemical cell,

which comprises a casing, a negative electrode, a positive electrode comprising a positive electrode active material provided as a physical vapor deposited layer.

However, the prior art of record do not teach the secondary cell comprising a cathode comprising a substrate having opposed first and second major faces; and a cathode active material provided as a physical vapor deposited layer coated on both of the first and second major faces of the substrate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
